*GR-1® and RC-14® are Trademarks of Chr. Hansen A/S.*

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.*
Finding and Maintaining a Healthy Balance

A woman’s body may be constantly challenged by changes in lifestyle factors such as stress, diet, or medications that can disrupt the delicate vaginal pH and microbiota necessary for good feminine health.

Get the Balance Right with Strain-Specific Probiotics

Specific probiotic strains can have different effects on health, including the support of vaginal microbiota balance and well-being. UltraFlora Women's features a 50:50 blend (2 billion CFUs) of two strains that have been extensively studied specifically for their effects on vaginal microbiota—Lactobacillus rhamnosus GR-1® and Lactobacillus reuteri RC-14®. Backed by clinical trials that demonstrate support of healthy vaginal microbiota, both strains have been shown to increase the number of beneficial bacteria called lactobacilli and help promote balanced vaginal microbiota.

UltraFlora Women’s features L. rhamnosus GR-1® and L. reuteri RC-14®, two strains that have been shown to help:

- Maintain a healthy vaginal microbiota by increasing the number of beneficial bacteria such as lactobacilli
- Colonize the vaginal tract when administered orally

Why UltraFlora Women’s Probiotic Formula?

UltraFlora Women’s is specially formulated to support vaginal and urogenital health by utilizing two clinically tested probiotic strains backed by more than 20 years of laboratory research and 10 years of clinical evaluation to support safety and efficacy.

- Oral dose in just one daily capsule
- Guaranteed potency and viability through date of expiration

How Do Oral Probiotics Reach the Vaginal Tract?

It takes a high-quality and stable probiotic strain to survive the gastrointestinal tract and remain effective for supporting women’s health. The probiotic strains in UltraFlora Women’s, Lactobacillus rhamnosus GR-1® and Lactobacillus reuteri RC-14®, have demonstrated the ability when taken orally to travel from the gastrointestinal tract to the vaginal tract.
